### Report on "Orientation program on Insight to the preparation of Python Programming, Android Apps and Web Development"

Resource Person: Mr Jeetu Gupta ,  
Training Manager at FINLAND Labs, Visakhapatnam

Date: 06-10-2021

Venue and Time: Seminar Hall, 11.00 AM to 12:30 PM

No. of Participants: 498 (III B.Tech (All branches) )

Department of Training & Placement organized an "Orientation program on Insight to the preparation of Python Programming, Android Apps and Web Development"

on 06-10-2021 at 11.00 am in seminar Hall, Mr. Jeetu Gupta , Dept. of Education & Training Development, Finland Labs (Unit of Revert Technology Pvt. Ltd)

He explained Android applications are to be operated on the Android Operating System. To start Android app development with Python, there are various platforms that enable us to write the codes purely in Python. We can use python for web development, app development, analysis and computation of scientific and numeric data and software development.

Following are some of the platforms for Python Android Development:

- QPython
- PySide
- PyMob
- Pyqtdeploy
- Kivy

And there are some more tools that help us write code that can run on the Android operating system. All these platforms generate a native source code for their supported platforms. The native codes that are generated are similar to hand written code and they can be easily optimized by with the help of native compilers.

#### Issues in Creating Android App with Python

Though Android app development using Python is possible, it won't be as efficient as Android apps that are developed by using Java. As we all know that Java is the official language for Android as it was declared by Google. Java for Android is like the Standard of Android, and other languages that we use might not be as up to the mark as Java. Let us see some of the issues that might arise:

1. These frameworks might not support every feature of Android operating System.
2. Own tools can not be used always.
3. These codes might not run very fast as they first generate the native code which are then optimized by using the native compilers.
4. Sometimes the High level graphics might not be supported and at times it is possible that 2-D/3-D graphic support is not there

### Summary

In this DataFlair Android Tutorial, we've seen if Python can be used for Android application development or not. Then we discussed how Python can be used to develop Android app development. Later we also discussed some issues that might arise while using Python for an Android application.
